

Bullhead rail-built BUFFER STOP

With scale sized working oil lamp

The railways were masters of invention when it came to saving money, so spare lengths of rail often found another use.

One of the most common uses in all regions of UK was the rail-built buffer stop which could be created as needed using the rail, bolts and fixings already found in every works depot.

Our Rail-Built Buffer stop has been carefully scaled using both original drawings and photographs of real buffer stops. It is accurate down to the properly scaled red oil lamp (with hinged handle) and provided with an easy to use "resistor PCB" to let you set the lamp at just the right brightness.

Available now from Gaugemaster and all good hobby shops in packs of two, it looks fantastic and is easy to install on code 100, 83, 75 or Finescale BS95R scale bullhead track.

It is "ready to use" in 16.5mm (OO) gauge - and has also been made available as a simple 3 part kit for EM and P4 modellers.
