

Cobalt-S

The switch that switches
Everything

Technology doesn't have to replace reality!

Cobalt-S has been built with what are traditionally the highest quality of materials and it's been designed to look like the signal box levers of old, yet inside, it is a very modern product and with three internal switches there is simply nothing it cannot do!

Cobalt-S really is the one switch that can switch any electrical product ever designed for use on or control of a model railway!

So whether you use solenoids or motor drive point motors or need momentary or permanent contacts, Cobalt S will do the job - and still have the ability to give you frog power switching and control panel lights as well. Available singly or in 6 & 12 packs!

DCC the best of everything
concepts
