

# Ease your joints

- **Price:** £6.95
- **Cat No:** ESP-TRACK1.0
- **Site:** [www.dcccconcepts.com](http://www.dcccconcepts.com)

Making baseboard joints for portable layouts just got a little bit simpler as DCC Concepts has discovered a by-product of its Legacy track making components: scale sleepers which can be used as anchor points in place of copper-clad strip at baseboard joints. The packs contain 80 pre-etched 32mm long sleepers for 'OO' gauge, each of which has a pair of soldering pads positioned at the correct spacing for 16.5mm rails. The packs are available in 1.0mm and 1.6mm thicknesses making them suitable for use with Peco code 100 and code 75 tracks as well as others. Another good point is that they are electrically isolated as delivered, so there is no need for scoring of the upper surface. Simple, effective and readily available. (MW)
