

Alpha Mimic Ground Signals powered by the SPS-12 and controlled by Cobalt motors

There are similar switches on the other Cobalt turnout motors

To reverse the ground signal output to match the Cobalt, swap the yellow and purple wires at the relevant Cobalt

Start with a 5k Ω resistor for each signal then increase or decrease to suit preferred brightness.

12v DC Split Power Supply DCP-SPS12
(or DCP-SPCB board only if you have two matching power supplies)

*To other Cobalt/
Signal pairs*
