

**Cobalt S Lever to Mimic LEDs using SPS 12**

Note: One channel of the SPS 12 is used rather than a two wire source because the SPS 12 is already utilised for other purposes (eg driving Mimic Ground Signals from the Cobalt)

Start with a 5k  $\Omega$  resistor then increase or decrease to suit preferred brightness.

12v DC Split Power Supply DCP-SPS12

To other CobaltLEDs/  
Lever pairs
